**I**F your printing costs are too high, and there are delays and other irritations, instal a Roneotype Office Printing Machine. Make it do all your printing on the premises—at a moment's notice—at the rate of thousands per hour—at a saving of at least 40% of printers' prices.

A Roneo Addressing Machine, operated by a junior, will address in a matter of hours work that formerly took as many days. From stencils cut on any typewriter it produces neat and accurate addresses on envelopes, statements, price lists, etc., at the rate of **800 per hour**.

The blank space on the stencil card can be utilised for records, such as purchases, classes of goods bought, credit limits, quotations, date circular letters sent, etc. This makes the Roneo Addressing System doubly valuable, in that it combines a card index system as well. Guide cards and a variety of colours for the stencil cards make any system of indexing or classification possible.

## Movable Unit Steel Partitions

Roneo Steel Partitions and Doors are built up from standard unit sections to suit any requirements of office planning. They are readily taken down and re-arranged, without damage, at any future time. This permits the grouping of the staff of each department regardless of its growth or diminution, and greatly increases the value of the floor space. Every room becomes a fire-and-sound-resisting unit, and the stove enamelled finish may be in any colour to suit the general colour scheme.

## Steel Library Bookstacks and Library Equipment

Roneo Steel Bookstacks solve two of the most serious problems in Library equipment, namely, risk of fire and economy of space. Books in themselves do not burn readily, but a blaze arising from, and fed by, wooden equipment will soon destroy them. Steel Shelving increases the book capacity of the stack room by a considerable percentage.

The Roneo Company was the first in England to manufacture Steel Library Equipment on a large scale, and to-day holds premier position, having at Romford, Essex, the largest factory of its kind, especially equipped for the manufacture of such work.

## THE "FLEXA" FILING SYSTEM

**N**O System deals with filing problems so completely and yet with such simplicity as the "Flexa" System.

It is speedy—giving immediate access to any wanted paper.

It dispenses with the Card Index.

It cuts out 99 per cent. of possible errors, and enables you to round up the remainder in a few moments.

It is simple—easy to learn and easy to use.

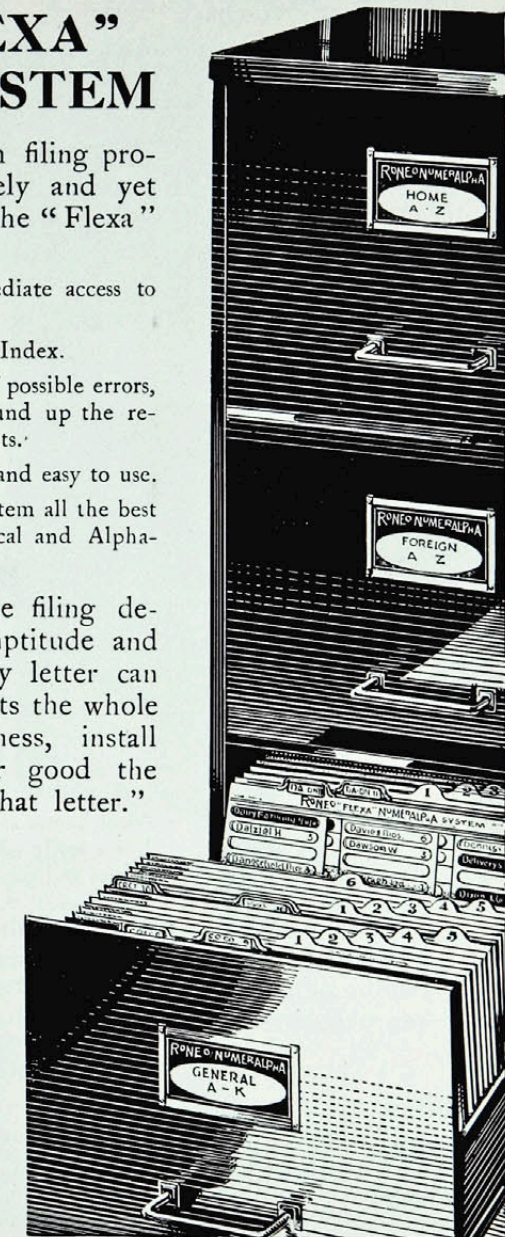

It embraces in the one system all the best points of both Numerical and Alphabetical Systems.

As the efficiency of the filing department, and the promptitude and precision with which any letter can be produced, vitally affects the whole working of any business, install "Flexa" and banish for good the phrase "I cannot find that letter."

The

Roneotol is a new Roneo system which converts the ordinary "blind" card index into an up-to-date yet inexpensive visible card system with practical signalling possibilities.

This system can be applied to existing record cards or supplied as a complete new outfit.

As soon as the drawer is opened, the titles on the cards are seen at a glance, as the top edges are spread apart by the Roneotol springs which are the basis of the system. Speed of entry and reference is thereby doubled.

These have enabled thousands of commercial houses to eliminate entirely the use of Postage and Insurance Stamps. Coupon counting and cancelling with accuracy and at a speed never before attained.

### Machine-stamped Health and Unemployment Insurance Cards

Affixing adhesive Stamps to National Health and Pensions Contribution Cards and Unemployment Books is a tedious business occupying several hours weekly.

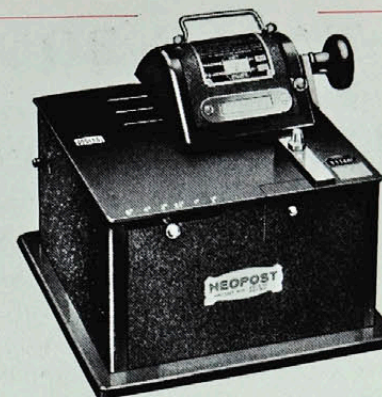

**The Roneo Stamping Machine** imprints the cards with impressions of the values required in a fraction of this time, the resultant saving in clerical cost being obviously valuable.

Losses by peculation or accident through the use of loose Insurance Stamps are prevented, and the purchase of odd quantities of these stamps is abolished. The machine records the impressions it makes and expenditure is readily checked and controlled by the meter readings.

In the United States and Canada five different times have been arranged by the Railway Companies. *Atlantic Time* is that of the 60th meridian, *Eastern* that of the 75th, *Central* that of the 90th, *Mountain* that of the 105th and *Pacific* that of the 120th meridian west of Greenwich. But the boundaries actually in use do not follow the above meridians exactly. Europe has three time systems: the *Western*, taking its time from Greenwich, the *Central*, or *Mid-European*, varying by one hour, and the *Oriental*, or *East-European*, varying by two hours. Australasia has adopted a Standard Zone time, ranging from 8 hours fast in West Australia to 11½ hours fast in New Zealand.
